Page 188, *for* final paragraph, lines 1-7 from base, *read* as follows:—

One of the most interesting characteristics of this genus is the very remarkable change which takes place in the form of the leaves of many of the species as the plant advances from the juvenile to the adult stage. When seeds of any of the species having cylindric leaves in the adult state are sown, the seedling plants invariably have moderately thin flattened or concave leaves, which spread widely in a lax rosette. As the seedling
